The American Women's College

**Assessment Started**

May 31, 2018 @ 11:32 AM EDT

**Assessment Completed**

June 1, 2018 @ 9:47 AM EDT

**IP Address**

8.20.190.70

**# of online courses:**

5

**I feel that The American Women's College is the right school for me.**

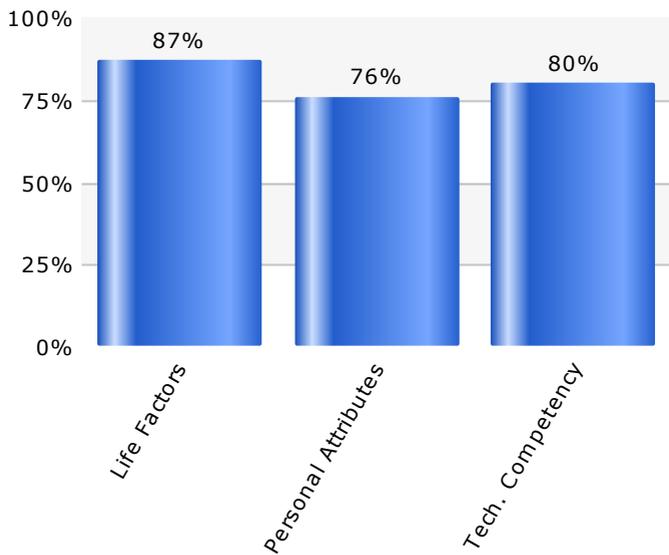

Yes, I am **very confident** that it is the right school for me.

**Are you a first-generation college student?**

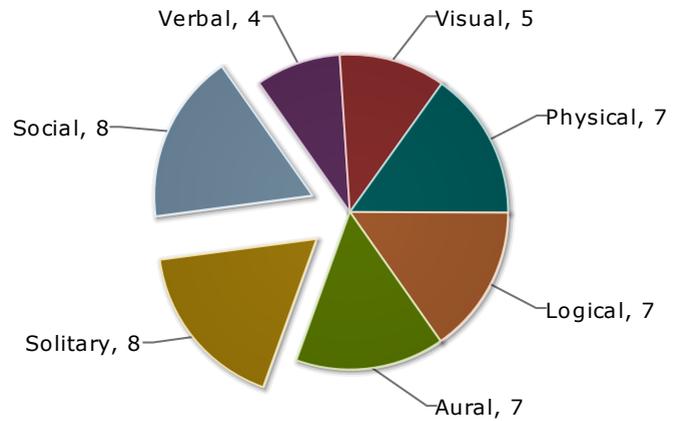

No

# Assessment Summary

## General Summary

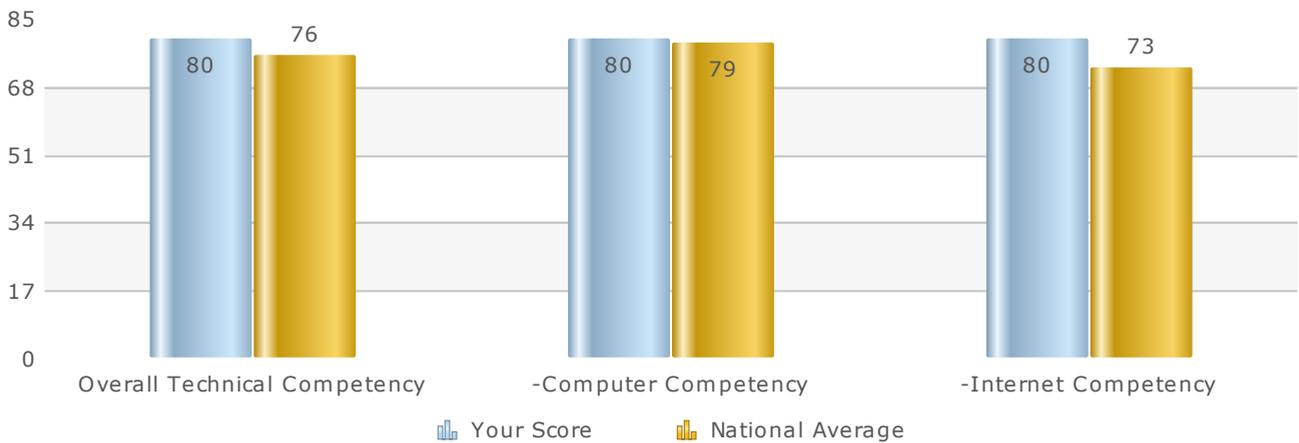

## Learning Styles

Your primary learning styles are Social, and Solitary

## Comparison To National Averages

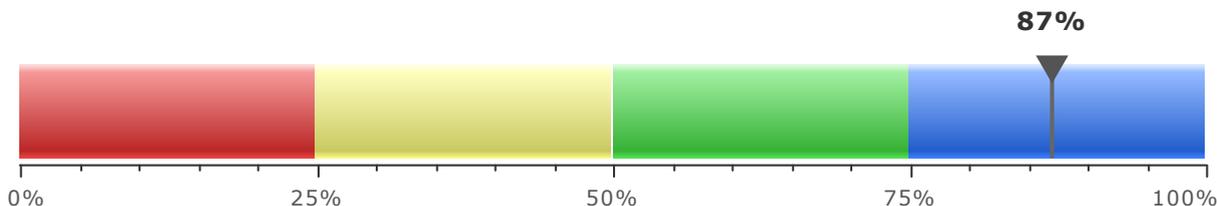

The national average represents the average of all students from all schools who have taken this version of the assessment. These national averages are automatically updated monthly.

# Life Factors

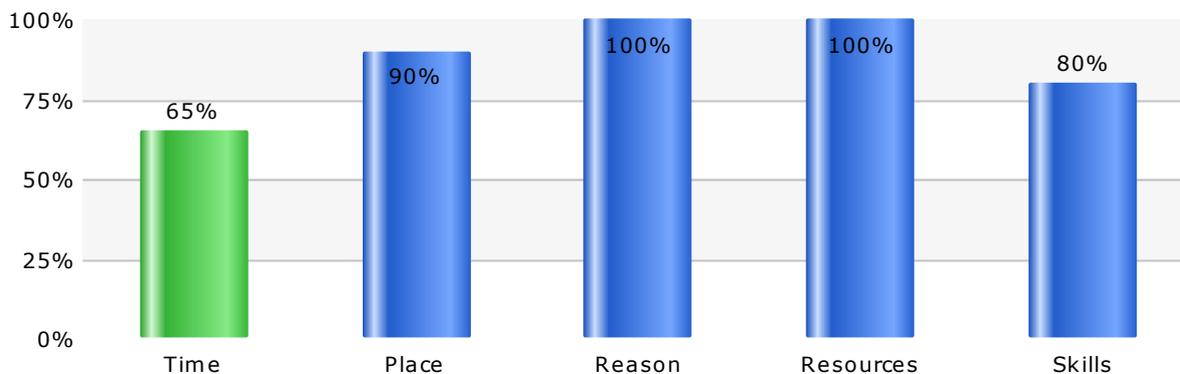

Many students strongly desire to continue their education. However, often other situations in life prevent them from being able to do so. The Life Factors section of this assessment asks questions about other elements in your life that may impact your ability to continue your education. The section measures five items: Time, Place, Reason, Resources, and Skills.

You may be able to modify circumstances which impact some of these life skills. If so, you are encouraged to take appropriate action to help yourself succeed. But some of the circumstances in life may be beyond your control. If this is the case, being aware of these realities and planning accordingly may be beneficial for you.

 The maximum possible score for this section is 100%. You scored a total of 87%. Your results for each of the five areas are below.

## Detailed Item Results

### 3

## Time

The amount of time you have available to participate in activities related to your school work is a **minor concern**. While you do have some time available for your school work, you need to communicate with others that you are continuing your education and may need to opt out of some activities to devote time to studying. You need to identify exactly what times of day you have available for studying and then guard that time just like it was an appointment on your calendar. Avoid activities like social networking which research has shown can easily consume too much time and distract you from studying.

A generally accepted rule of thumb for time spent with college classes is that you should expect to study about 2 to 3 hours per week for each unit of credit in a typical 16 week class. Based on this rule of thumb, a student taking 15 credit hours should expect to spend 30 to 45 hours each week with school work. Realize that this is similar to the time required of a typical job. Continuing your education requires a substantial investment of time. Of course, if you are working while you attend school, you will need to budget your time carefully. As a rough guideline, your studying time might be divided as follows.

If your course is	time for reading the assigned text (per week)	time for homework assignments (per week)	time for review and test preparation (avg. per week)	total study time (per week)
3 credits	1 to 2 hours	3 to 5 hours	2 hours	6 to 9 hours
4	2 to 3 hours	3 to 6 hours	2 hours	8 to 12 hours

credits	2 to 3 hours	3 to 6 hours	3 hours	6 to 12 hours
5 credits	2 to 4 hours	4 to 7 hours	4 hours	10 to 15 hours

4

## Place

Your answers indicate that having an identified, appropriate place to study is **not really a concern for you**. Review the resources below for helpful hints about how you can make your places of study most conducive to learning.

Here are some helpful hints about creating an appropriate place to study. (1) Find an environment that suits you. Some persons prefer silence and some prefer background noise. (2) Select a comfortable place, but not so comfortable that you will fall asleep. (3) Claim the space as yours. Inform others the space is your study area and they are not to disturb items or you while in the space. (4) Avoid common areas such as kitchen tables or den couches. (5) Avoid multi-tasking. While you are studying close your email and do not participate in social networking. (6) Feed your stomach then your mind. If you are hungry you may not be able to focus and may be tempted to take frequent breaks to snack. (7) Be supplied. Keep all of the supplies such as pens, paper and highlighters at your study space. (8) Have a bright idea. Make sure that your study space has appropriate lighting.

4

## Reason

Your answers have indicated that you have **well defined, strong reasons for going to school**. Keeping yourself motivated with the goal in mind is important as you take your courses. You are encouraged to write down the ways that going to school will benefit you. Occasionally review this list to stay motivated.

Several research studies have shown that the more education a person has, the more annual income they generate and the better their quality of life. Today, a college degree is an essential ingredient. Employers frequently use degrees as a way to screen applicants. Then even after you get the job your salary may be reflective of your educational credentials. On average, a person with a Master's degree earns \$31,900 more per year than a high school graduate—a difference of as much as 105%! So keep yourself motivated and your eyes on the prize.

4

## Resources

Your answers indicate that resources such as support from family, friends and your employer are **not much of an issue for you**. Consider yourself fortunate and write a letter of appreciation to any people who are being supportive of your decision to go back to school. Review the resources below for more helpful ideas on finding support for going to school.

To be successful, you really need the support of others and the appropriate resources. To make sure that you have access to the financial resources to continue your education, talk to the financial aid office at your school. If you are concerned about having the physical stamina, consider getting a physical exam from your doctor. If you have family or friends who can support you in ways such as childcare, have a discussion with them about your plans for going to school and express how you would appreciate their support. If appropriate, have a discussion with your employer. Ask if the company has an educational reimbursement plan and any policies regarding studying while on the job or during breaks.

4

## Skills

Your responses to these questions indicate that you are **confident in your academic abilities**. Many schools provide organized peer tutoring services. You are encouraged to consider volunteering in a program like this to assist other students. You might also want to review the resources below for more information on being academically successful.

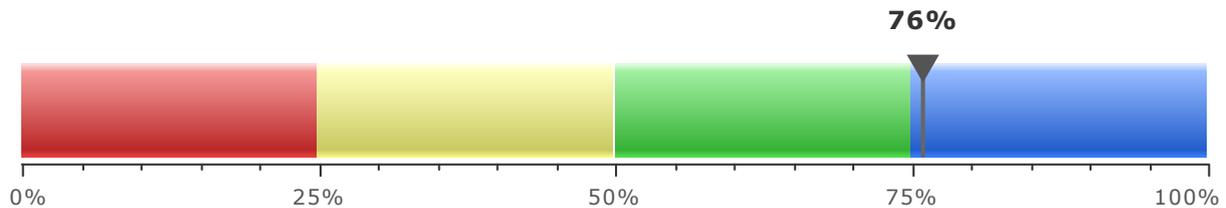

College is where you become more intelligent. You are not expected to be a genius to get in, just prepared enough to know how to work and willing to make the necessary sacrifices of your time and energy. Do you know how to study? Can you stick with a task until it is finished? Being successful in college is often as much attitude as aptitude.

# Individual Attributes

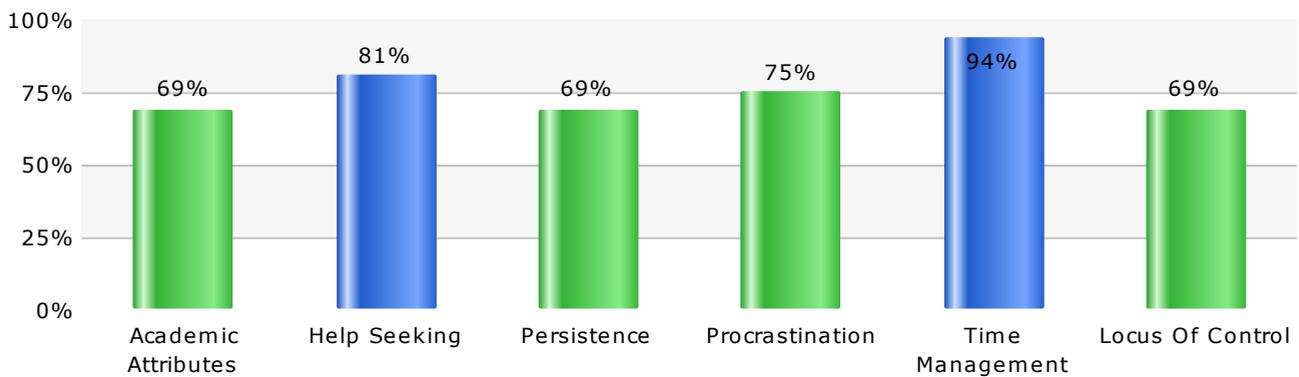

This section measures six items: time management, procrastination, persistence, academic attributes, locus of control, and willingness to ask for help. These attributes can be enhanced or improved through academic interventions. Ask your faculty member or academic advisor about the resources for remediation and/or support which your school may provide.

The maximum possible score for this section is 100%. You scored a total of 76%.

## Detailed Results

### Academic Attributes

Academic attributes reflect your history of success with academic pursuits as well as your perceived ability to perform well academically. **While you have had some success academically, you could potentially have academic challenges.** It is recommended that you discuss this with someone such as an academic advisor or faculty member.

### Help Seeking

The Help Seeking category reflects your willingness to ask for help when you encounter a problem. It is very important that you seek help from the faculty member or other appropriate person when you are confused about the course content. **Your score indicates that you are comfortable seeking help when needed.** When you experience problems in your courses do not waste time, but seek help soon.

### Persistence

Persistence is a measure of your likelihood to finish what you started. **Your score indicates a moderate rate of persistence based on your prior experience.** During your courses you may have feelings of isolation or feel overwhelmed. At these times don't allow yourself to become discouraged and entertain ideas of dropping out. Hang in there!

### Procrastination

Procrastination is putting off until tomorrow what could be done today. It is easy to delay starting work on assignments. **Your score indicates that you are somewhat likely to procrastinate.** You are

on assignments. **Your score indicates that you are somewhat likely to procrastinate.** You are encouraged to get started immediately on course assignments. Imagine how good it would feel to complete an assignment early.

4

## Time Management

---

Courses have differing expectations regarding attendance and/or participation. However, a significant amount of time is still required each week for reading course materials. **Your score indicates that time management is not a problem for you.** However, it is recommended that you plan for a specific number of hours each week to work on course assignments.

3

## Locus Of Control

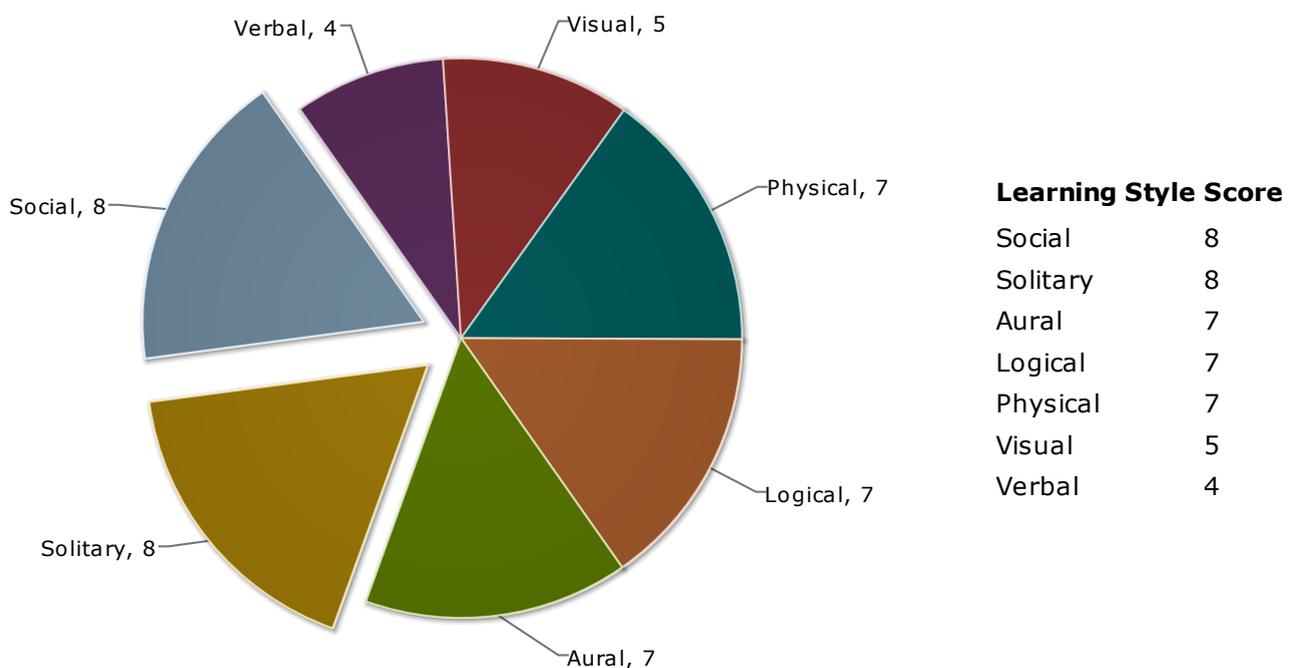

---

Locus of Control is a measure of the degree to which you feel that you are in control of what happens to you. A person with high (internal) locus of control believes that their experiences are controlled by their own skill or efforts. **Your score indicates a moderate degree of locus of control.** This may leave you having feelings that regardless of your efforts, your grade will mostly be determined by how much the teacher likes you or just fate. You are encouraged to periodically discuss your performance in the course with your faculty member.

# Learning Styles

People learn differently. Some people are very comfortable reading large amounts of text. Others are more comfortable listening to someone speak or writing things down for themselves. A person's preferred "learning style" is the approach to learning that feels most natural to them. It is based on a combination of their experiences, strengths, weaknesses, and preferences. Everyone has a mix of learning styles, and some people have strong, dominant learning styles. There are no "right" or "wrong" learning styles. Most people tend to adapt their learning style to the context of learning. With practice a person can strengthen themselves in the learning styles that are least comfortable for them. When a person recognizes the learning styles that work best for them, they can then make a better informed decision about the ways that they approach learning new things.

**i** Your primary learning styles are Social, and Solitary. You can view more information about each learning style in the expanded learning styles details located in the Appendix.

## About Your Primary Styles

- Social (interpersonal) – You feel most comfortable learning when you are surrounded by others.
- Solitary (intrapersonal) – When it is time to focus on a learning task, you prefer to be alone.

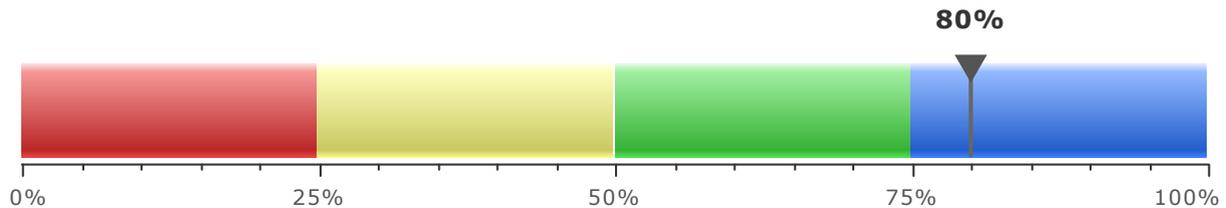

**i** REMINDER: You can view more information about each learning style in the expanded learning styles details located in the Appendix.

# Technical Competency

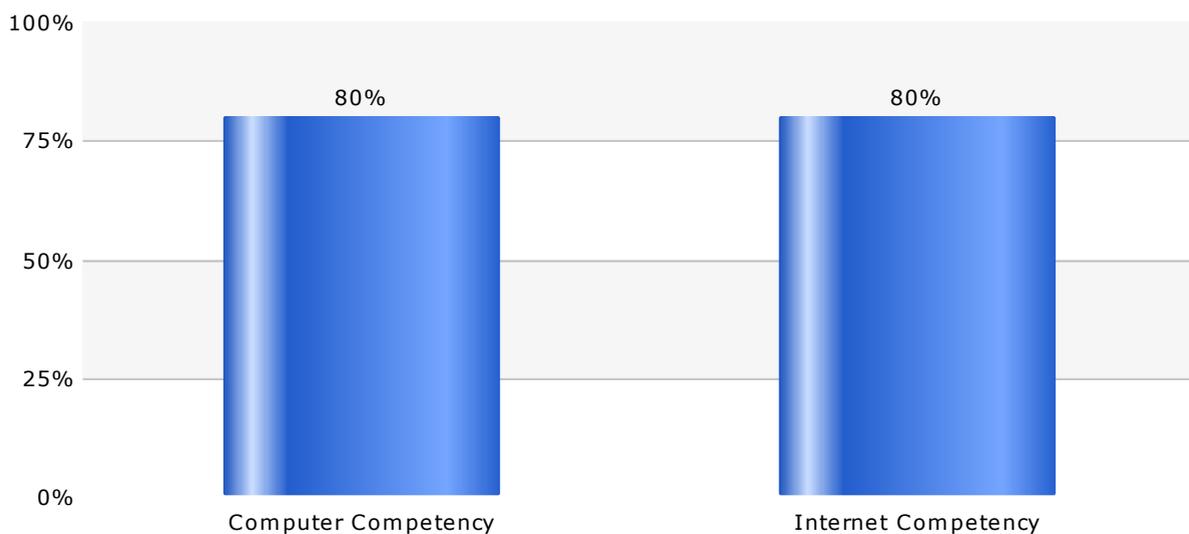

In order to participate in class, a student must have some way to get to the classroom. A student in a traditional class may drive a car on a highway to attend class, but a student in an online course "drives" a computer on the Internet (the Information Highway) to "attend" class.

The maximum possible score for this section is 100%. You scored a total of 80%.

Your score indicates that you have most of the basic skills needed to participate in your courses.

4

## Computer Competency

Your responses indicate that you have had some experience using a computer but that there are still some computing skills that you can sharpen. You may find it difficult to complete assignments in your courses if you need to spend time learning how to use the computer. (Imagine if you had to drive a car to a class, and you started learning to drive on the first day of class!) You may want to consider becoming competent in basic computer skills, such as printing and opening and saving files, before you commit yourself to a course. Here are a few sites that offer free computer tutorials:

- <http://www.trainingbetter.com/computer.htm>
- <http://tutorials.beginners.co.uk/>

4

## Internet Competency

Your responses indicate that you have quite a bit of experience using the Internet but that there are some aspects of the Internet that may be still new to you. You may find it difficult to access course materials and assignments in your courses if you need to spend time learning how to take advantage of some aspects of the Internet. (Imagine if you had to attend class on a strange campus, and you didn't start figuring out how to get to the campus and the building until the first day of class!) You may want to consider "surfing" the Internet and becoming more competent in basic skills, such as downloading files and using email, before you commit yourself to a course. Some basic Internet information has been compiled by April Maskiewicz at [http://tepadmin.ucsd.edu/maskiewicz/MeaningfulScience/Intskills\\_stu.htm](http://tepadmin.ucsd.edu/maskiewicz/MeaningfulScience/Intskills_stu.htm) and you can find free

Internet skills tutorials at <http://tutorials.beginners.co.uk/index/category/10>.

## Resources For Support

### Expanded Learning Styles Information

#### Social

Social (interpersonal) – You feel most comfortable learning when you are surrounded by others.

Have others described you as a "people person?" Does being around friends seem to energize you? Do you feel sad or fatigued if you have to spend long periods of time alone? Are you the type of person that others come to when they just need to talk about something? Have others commented that you are a good listener or conversationalist? Do you find that studying in a group is beneficial? Does your understanding of something increase when you can "bounce your ideas off of someone?" Do you enjoy games that involve other people? If these ideas describe you, then you have a social learning style.

A person with a social learning style may often say these phrases:

- Let's get together on that.
- We can work it out.
- What do you think about that?
- We do better when we pull together.
- There is no "I" in "team."

#### Implications for learning

What does being a "social" person like this mean to you as you attempt to learn new things? Try to involve other classmates in your learning process as much as possible and when appropriate. Realize that this may not only help you, but them as well.

Being a social learner has strong advantages and disadvantages. Studying in a group can help you understand things better than perhaps you could on your own. A classmate may phrase something even better than the faculty member did. The energy and accountability that the group can provide can be a real plus. However, recognize that groups can often be distracted from the task at hand just by one or two persons in the group. Often groups can waste quite a bit of time with "socializing" that is not connected to learning. If you are studying with a group, plan to take frequent breaks to allow for informal and off-the-topic discussions. Then get back on task as quickly as possible.

Many social learners avoid participating in online courses because they fear they will miss the social interaction. While it is true that online courses do not typically provide face-to-face contact, there are many ways in which socialization can occur even in an online course. Ask your faculty member for permission to email the class to form an online study group. Many online courses provide tools such as group chat, discussion boards, and group email functions.

If you find that the tasks associated with continuing your education cannot be taking place in a very social environment, be sure to plan for time away from your studies for social interaction. If you do not, you are likely to get discouraged in your course work.

#### Solitary

Solitary (intrapersonal) – When it is time to focus on a learning task, you prefer to be alone.

Do you find that you can think best when you are not distracted by others? Have you ever found yourself retreating to a quiet place when it is time to study? Have you ever turned down an invitation to study with a group? Do you consider yourself to be introspective – aware of your own thoughts and feelings? Do you keep a journal or other private log? Are self-help books one of your favorite types of reading? Do you tend to select vacation places that are not too crowded? If these statements describe you, then you probably are inclined toward a solitary learning style.

Contrary to popular beliefs, people with a solitary learning style are not necessarily "loners." In fact they may really enjoy being around others and have many friends. But when it comes time to mentally focus on a task such as studying for a test, people with a solitary learning style feel more natural and can be more productive when alone.

Solitary learners are often typified as being "thinkers." Solitary learners enjoy a peaceful and quiet moment alone with their thoughts. Because of this, they are typically aware of their own thoughts and emotions. They

often are highly motivated because they take time to assess their own accomplishments and goals.

A person with a solitary learning style may often say these phrases:

- I just need to get away for a while.
- I need some time to think it over.
- I need some "me" time.
- Silence is golden.

### **Implications for learning**

What does being a "solitary" person like this mean to you as you attempt to learn new things? First of all recognize that there are no "right" or "wrong" learning styles. Often people with a solitary learning style may feel criticized by individuals with "social" learning styles. However, a wise person knows their own preferences and is confident in defending their choices. Express to your friends that it just feels more natural for you to study alone, and you appreciate their understanding of that.

If learning alone feels most natural for you, then plan time to be alone as a part of your educational activities. You may also need to plan for a space which is free from distractions.

Being alone can have advantages and disadvantages. The advantage of being able to focus more may be cancelled by the disadvantage of the lack of accountability. Even if you are a solitary learner, it is good to share your progress with another person so that they can help to keep you motivated. While your "study partner" may not be physically there with you as you study, they can check in on you to make sure that you are staying on task.

If, while studying, you find that you do not understand something, don't spend too much time trying to "figure it out for yourself." Don't hesitate to call someone else such as a classmate or the instructor. This may prevent you from wasting considerable time.

Resist the temptation to use your alone time which should be used for studying for other pleasures such as napping, electronic games, or non-education related reading. Keeping a journal of the amount of time that you spend actually studying may be a beneficial exercise.

Take advantage of the fact that you are alone. This may allow you to talk out loud to yourself as you are studying. You may also find it useful to even role play situations by yourself. You can also use the private time to strengthen your aural learning styles by putting course content to music and singing the songs to yourself to help you remember the information.

## **Aural**

Aural (auditory-musical) - You find that using sound and music in your learning environment is a good strategy.

Do you seem to most often have a "song in your head?" Do you find yourself regularly strumming your fingers or tapping your pencil? Can you sing well or play a musical instrument? Have others commented that you have strong musical abilities? When you hear certain songs, does it evoke strong emotions? If this describes you, then you most likely have an aural learning style.

A person with an aural learning style may often say these phrases:

- That sounds good to me.
- That name rings a bell.
- Your voice is "music to my ears."
- I am "tuning you out."
- I hear you loud and clear.

### **Implications for learning**

So what does being an "aural" person like this mean to you as you attempt to learn new things? One of the most often used advantages is that aural learners can "set facts to music" which helps them to learn the information. Aural learners can often "make up a song" about a concept to serve as a memory aid. Examples of this include "The President's Song" or "The Alphabet Song" which young learners use early in their education.

Another useful technique is to have music playing in the background as you are studying. Aural learners often report that they can focus much better when music is present than in silence. Some even report that during a test they can recall a song that was playing while they were learning certain facts.

Even persons with low levels of aural learning styles may find it useful to think of a popular jingle from a television commercial and "put the facts to music" using the rhyme and rhythm of the jingle as a memory aid.

A final strategy for aural learners is to identify music that motivates them. Perhaps it is a song like "Eye of the Tiger" which stirs motivation. Then when beginning an exam or learning activity, the person can be humming that

song to themselves to boost their motivation and confidence.

## Logical

Logical (mathematical) – When it comes to understanding and remembering new information, you feel most comfortable when you use logic, reasoning, and systems thinking.

Do you enjoy word puzzles such as crosswords or math puzzles such as Sudoku? Can you conduct basic or even moderately complex math computations in your head? Do you find comfort in setting a financial budget and/or keeping a to-do list and checking things off? Do you often rank-order the items on your to-do list? Do you find yourself sometimes identifying flaws in someone else's reasoning? If these statements describe you, then you have a tendency toward being a logical learner.

A person with a logical learning style may often say these phrases:

- Now that really seems logical.
- It just makes sense to me.
- The facts speak for themselves.
- I am going to check that off my list.

### Implications for learning

What does being a "logical" person like this mean to you as you attempt to learn new things? As a logical learner you are naturally inclined to want to understand something rather than just memorizing facts. This can be a strength or a weakness. Use your natural curiosity to deeply understand the concepts in your courses, but don't allow yourself to get too bogged down in something that you do not understand. Some have called this "analysis paralysis." Recognize that at times when preparing for a test, memorization is appropriate.

Use your natural organizational skills for your benefit. Make lists of all the things you need to study, and reward yourself by checking them off upon completion.

A logical person enjoys a mental challenge. If you are feeling mentally fatigued by your course content, it may actually rejuvenate your thinking to take some time out and work a crossword or math puzzle.

Finally, understand that not all people are as logical as you in their approach to learning. You may find that you have completed your assignments far ahead of your classmates. Do not be critical of others if they do not keep up your same pace or use the same orderly process toward learning that you use.

## Physical

Physical (kinesthetic) - You like to be actively involved in learning by using your hands, body, and sense of touch.

Have you ever found that you can think clearly when you are exercising or doing something like going for a walk? Do you often find yourself getting up from your desk just to move around? Do you enjoy physical activities like sports and making things with your hands? If so, then you have a tendency toward the physical learning style.

A physical learning style can exhibit itself in many ways. It may be that you like doing detailed tasks with your hands such as sewing or carving. You may enjoy "getting your hands dirty" with manual labor like gardening. Or it could be that you seem to have a strong sense of feel to notice differences in textures or fabric. You could be the type of person who seems to "talk with their hands." As a child you may have been inclined to take your toys apart just to see how they worked.

A person with a physical learning style may often say these phrases:

- This feels like the right thing to do.
- I can't get a handle on the situation.
- Let's keep in touch
- I follow your drift.
- They need to get a grip.
- That idea just does not sit right with me.
- My gut instinct is...

### Implications for learning

What does being a "physical" person like this mean to you as you attempt to learn new things? Some physical learners report that they feel trapped or confined in a lecture classroom. Just listening to someone else talk does not appeal to them. They feel the desire to "get up and move around."

When you find yourself in a lecture class, it should help if you are active with taking notes. The act of taking notes will keep your hands and mind busy. As things are being described try to imagine what they would feel like if you were actively doing them. For example, if you are studying about forests try to imagine going on a hike.

Think about the sensations of walking up a steep hill. Imagine how tired your legs and feet would feel. Identify what sounds you might hear and the smells you might encounter.

As you are preparing your study materials, use physical objects as much as possible. This may be in the form of flash cards for math or manipulatives to help you organize mathematical concepts. If you are studying a subject like biology, as much as possible try to actually hold, touch, and feel the objects being studied.

Experiential learning is a beneficial learning technique for all types of learners, but especially for physical learners. Experiential learning is when you get out of the classroom or away from the computer and actually "experience" what you are studying. Reflect on your elementary learning experiences. It may be that you recall the "field trips" as much as any other learning strategies. As an adult learner you may need to craft your own "field trips."

If possible, you may also find it useful to do role playing to "act out" the concepts that you are studying. For example, if you are in a psychology course exploring topics related to hyperactivity, you might benefit from replicating the behavior of a hyperactive person.

## Visual

Visual (spatial) – You seem to comprehend new information when you can see a picture or graphic to illustrate it.

If someone asks you for directions, do you tend to draw them a map? Do you typically find that you have a "good sense of direction?" Can you easily remember where you parked your car in a large parking lot? Do you often find yourself "doodling" while taking notes? If these ideas seem to describe you, then you are likely a visual learner.

A person with a visual learning style may often say these phrases:

- Let me show you.
- I can picture it in my mind.
- I can see his face, but I can't remember his name.
- I don't look at it that way.

## Implications for learning

What does being a "visual" person like this mean to you as you attempt to learn new things? With the evolution of the Internet, there has never been a better time to be a visual learner. Using a search engine, one can easily locate images and diagrams for most concepts covered in a course. Take advantage of these resources.

In addition to the visual resources which you can find online, there is benefit to drawing things out for yourself and/or visualizing things in your mind. You may find it beneficial to draw concept maps to illustrate related ideas. Make use of your impulse to scribble by producing items that are related to the course content.

Organizing information using colors may be especially beneficial for you. As you take notes, underline or highlight items using colors.

## Verbal

Verbal (linguistic) – You prefer to be able to describe the new information that you are learning by using words.

Has anyone ever called you a "wordsmith?" Do you excel at word games ranging from crossword puzzles to tongue twisters to word related board games? Do you seem to have a knack for making up rhymes or acronyms? Do you consider your vocabulary to be more robust than most others? Do you look up the meaning of words that you do not know? If these questions relate to you, then you have a verbal learning style.

A person with a verbal learning style may often say these phrases:

- Put it in writing.
- I need to talk to you about something.
- Did you mean to say this word?
- In other words...
- Let me spell it out for you.

## Implications for learning

What does being a "verbal" person like this mean to you as you attempt to learn new things? Recognize that being a "verbal" learner can be a real advantage. There are many learning strategies that may come naturally for you and be quite effective. Consider using these learning strategies:

1. Read the content of the course out loud to yourself. Verbal learners pick up on clues when they can both see and hear words.

2. Make use of acronyms when memorizing or organizing content.
3. Talk out loud to yourself and put the course content in your own words.
